The ftat fatal shot is alleges, as Canale said, to have been fired from the flophpuse windowsill and that it bore "microscopic" markings like those of the rifle. Here are the picture of that weatherbeaten wood the FBI supplied.

There is not one of comparison with the ultra-smooth rifle barrel.

And according to these new papers it would have been the side, not the hottom of the rifle. What a way to shoot from inside a bathtub so clase to thw all and so far from the window there was no footing.

Sow upi picture.

Commnet on wrong side being taken.

Yet there is no doubt the case hangs on that rifle having been fired from this windowmill and the sill having been marked by it. The last sowrn statement was during the evidentiary hearong a October a year ago, when the surveyor the pplice used swore (p.337) Read Wenzler.

There are other proofs attached to the medical examiner's report.
